Impact

- Sedation rates reduced by 30-40 %
- Radiation dosage reduced by 50-75 %
- Improved capacity utilization as a result of 15-20 %
- Reduced number of preparatory steps prior to scan
- leading to greater patient and staff satisfaction
- Higher quality images

案例 CASE

内饰灯光用户体验创新研究 Interior lighting UX innovation study

OBJECTIVES

*Insight in South Chinese perception and attitude towards behaviors in and around vehicle lighting experience and provide **design** solutions to cater to latent and innovative needs.*

Product / User Context

- Light inside the car
- Product-User interaction and context specific behaviour

Key Objectives

- Acceptance: Insight into consumer behaviour and (South) China user context
- Vision: Innovative creative ideas that are pragmatic but out of the box
- Proof of Principle results that are visual, 2D/3D and explain the core idea and insight with a “**WOW**” Factor

用户旅程customer journey

Audi Innovation

We can design a lighting system to detect user's situation prevent the possible bad feeling to optimize the mentally and physically driving experience.

03:00 pm

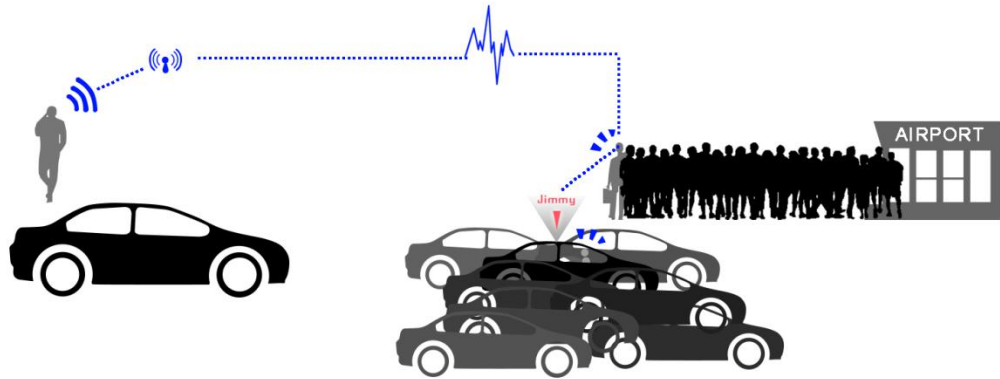

The phone call comes, I have to pick up a client.

03:40 pm

I arrive at the airport, but there are so many cars and people, I can't find my client!

04:10 pm

Finally I find my client, but it takes a long time, he seems not very happy, I feel so sorry.
